Le·git

Le·git

Legit is a complementary command-line interface for Git, optimized for workflow simplicity. It is heavily inspired by GitHub for Mac.

Git Workflow for Humans   Star ‹ 2,901

Feature branch workflows are dead simple.

```
$ git sync
# Syncronizes current branch. Auto-merge/rebase, un/stash.

$ git switch <branch>
# Switches to branch. Stashes and restores unstaged changes.

$ git publish <branch>
# Publishes branch to remote server.

$ git unpublish <branch>
# Removes branch from remote server.

$ git branches
# Nice & pretty list of branches + publication status.
```
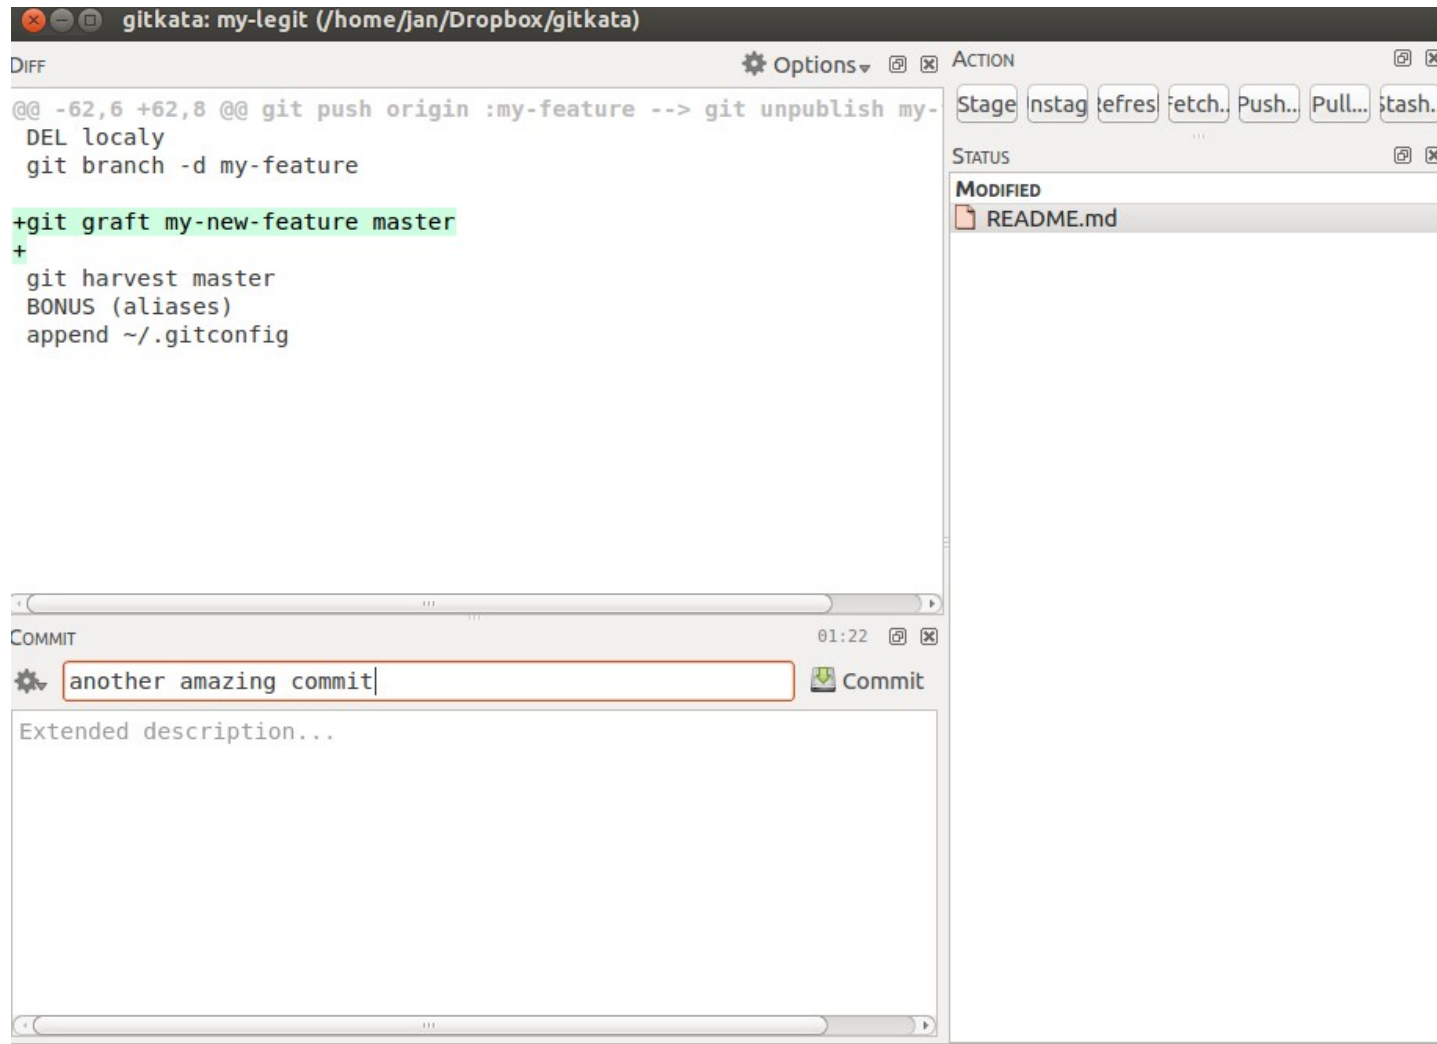

git-legit.org

fork it / clone it	git clone git://github.com/...	git clone git://github.com/...
Create branch	git checkout -b my-new-feature	git sprout master my-new-feature
Code and test	**work**	**work**
Verify commit	git status	git cola
Commit changes	git commit -am 'Add some feature'	git cola
Push branch	git push origin my-new-feature	git publish my-new-feature
Create pull request	github click	github click

changes in master after PR

master	git checkout master	git switch master
pull changes	git pull - -rebase	git sync
feature branch	git checkout my-feature-branch	git harvest my-feature-branch
apply changes	git rebase -i master	git harvest master my-feautre-branch

sudo apt-get install git-cola

- linux: gitg

- win i mac: sourceTree

legit maps git

git branch -a	git branches
git checkout master	git switch master
git pull --rebase	git sync
git push origin my-feature	git publish / git sync
git push origin :my-feature	git unpublish my-feature
git branch -d my-feature	git graft my-new-feature master

bonus

- append ~/.gitconfig

- [alias]

- lg = log --graph --pretty=format:'%Cred%h%Creset -%C(yellow)%d %Creset %s %Cgreen(%cr) %C(bold blue)<%an>%Creset' --abbrev-commit –date=relative

```
jan@jan-xps:~/Dropbox/gitkata$ git lg
